

PSYCHOLOGY

WHAT IS IT?

In a sense you are already a psychologist and have been most of your life. We are all interested in what makes people tick. When we first meet people we ask questions and we observe their behavior in order to find out about them. We also try to present a good image of ourselves to them. Studying A level Psychology takes this interest further than 'everyday Psychology'. Psychology is the study of people how people think, how they act, react and interact. Studying Psychology provides the student with a scientific way of analysing thinking and behavior.
